RESEARCH INTERESTS

Theoretical and applied Machine Learning, with a focus on Interactive Systems.
Reinforcement Learning, Generative Models, Online Learning.
Privacy and Fairness in Machine Learning.

EDUCATION

2015-Present Princeton University

*PhD Candidate in
Computer Science*

GPA: 4.0 · *PhD Candidate* · Computer Science
My research is focussed on algorithms for machine learning with provable guarantees on computational and statistical efficiency, with an attentive emphasis on **interactive learning algorithms**. Recent efforts have yielded rigorous methods for learning **Linear Dynamical Systems**, and algorithms for **Reinforcement Learning** with improved generalization performance.
Advisor: Prof. Elad HAZAN

2011-2015 Indian Institute of Technology, Kanpur

*Bachelor of
Technology,
Computer Science*

GPA: 10.0 · *Bachelor of Technology* · Computer Science
Following a rigorous introduction to computer systems and engineering, my coursework included 12 graduate-level courses on theoretical computer science, machine learning, and mathematics. My senior thesis details sketch-based algorithms for machine learning, and lower bounds in the streaming model.

*Ranked 1st (among
820 students)*

Awarded the **President's Gold Medal** for the best academic performance in the graduating class among all disciplines.

EXPERIENCE

Summer 2014 Research Intern, MICROSOFT RESEARCH, REDMOND

*Microsoft Research
Redmond*

Developed a Programming-by-Natural-Language framework to synthesize programs in targetted domain-specific languages given intents expressed as natural language prompts. The system supported multiple rounds of end-user interactions making it more robust than traditional NLP approaches. Concrete instantiations of the framework offer an interactive experience for repetitive data manipulation and summarization tasks.
